Bright House Deploys Mixed Signals

Mixed Signals' Sentry and Medius digital content monitoring solutions are being used by Bright House Networks in its major Florida cable systems serving Orlando and Tampa; Indianapolis; Birmingham, AL; Bakersfield, CA; and other markets. Bright House Networks is initially using Sentry to monitor both programming (SD and HD) and digital ad insertions and data carousels. Bright House is using the Medius remote monitoring and management system to control all the Sentries from a central location. Bright House Networks has currently deployed Medius in the NOCs of its Tampa and Orlando systems. (Booth 623)
